

Release Notes

CCPUcclb

Software Revision v2.1.9

Release Date: 2004 May 24

Features Added

- Added new CCNlib APIs `ccnxGetTimeout()` and `ccnxSetTimeout()` that allow an application program to query or set the timeout value (in seconds) used by CCNlib to determine if a node on the CCPUnet bus has expired. The default value of the timeout value is 30 seconds.
- Added the new CCNlib API `ccnxClrVoltLatch()` to allow an application program to clear on or more VOLT LATCH faults on the NetCCN.

Fixed Issues

- Corrected the problem with some ADC channels showing up in the wrong order.
